

WHERE: Poltava is a city situated in the east of Ukraine, on the right side of river Vorskla. Here, a headquarter of the National Bank of Ukraine is located, and it is the place where our DAB installation was made.

SALES AGENT: AKKORD UKRAINE

CONTRACTOR: PE Danilchenko

THE REQUEST

The National Bank of Ukraine, Poltava, has chosen DAB to gain a complete wastewater lifting station system. In fact, DAB was able to provide a tank (FEKAFOS 550 double), 2 macerators (Grinder 1000), an electric control panel (EBOX) and a remote system controller (DCONNECT BOX).

Why this choice?

Fekafos 550 double is an automatic collection tank and lifting station perfectly fit for residential and industrial applications.

Grinder 1000 is a macerating pump with an external capacitor box and a double mechanical seal, which specifically grants the maximum reliability.

EBOX is the perfect electronic control panel for drainage, pressurization and tank filling applications. Thanks to the display version, it allows quick installations. The connection of an external alarm device allows to understand if everything is fine.

DCONNECT BOX is the remote management system perfectly fit for most applications. Thanks to the Cloud service, you can check the system and manage it simply by using your smartphone or laptop.
